SPECIALTY GOODS
OF RUBBER AND SILICONE

**CUSTOMIZED SOLUTIONS FOR MEDICINE AND PHARMACY,
LABORATORY AND ANALYTICS, CHEMISTRY AND INDUSTRY**

PRECISE, CLEAN, RELIABLE, INNOVATIVE

Nothing is impossible – we have made this the guiding principle of every challenge we face. For over 50 years, our focus has been on manufacturing and distributing specialist items for the areas of **medicine and pharmacy, industry, chemistry and laboratory and analysis**. As a specialist in all kinds of rubber and silicone, we provide custom and tailor-made items adapted to your individual requirements.

Our company philosophy is entirely oriented towards delivering product solutions for sensitive areas of application that need to meet specific requirement profiles. Our staff's specialist knowledge and all organisational procedures are adapted to meet these stringent demands. Modern plants and equipment combine with sophisticated quality management to ensure that our products always deliver the same impeccable and certified quality.

OUR SERVICES

We find a solution to every problem! From the drawing or model to the end product, we support you with our specialist knowledge and skills in order to achieve an optimum solution for your application – because only sophisticated, well-thought-out products guarantee optimum functionality in the long term.

CONSULTANCY, PLANNING AND SUPPORT

We will accompany your project right from the outset and act as a reliable and equal partner at every stage.

CUSTOMISATION AND DEVELOPMENT

We approach each challenge individually in order to develop the optimum solution for your needs.

MANUFACTURING AND FURTHER PROCESSING

We identify the right production technology for every combination of materials, shape and area of application.

CONSULTANCY, PLANNING AND SUPPORT

For us, professional advice is of paramount importance. Our service encompasses the entire development process, from the initial problem definition to product development and manufacturing. With decades of experience, we will accompany your project right from the outset and act as a reliable and equal partner at every stage.

CUSTOMISATION AND DEVELOPMENT

We approach every problem individually in order to adapt to your requirements. We can either draw on and customise a wide range of ready-made solutions or work with you to strike out in a completely new direction. As part of this process, we help to translate design and application needs into specific elastomer-processing requirements.

YOUR
PROBLEM

OUR SOLUTION

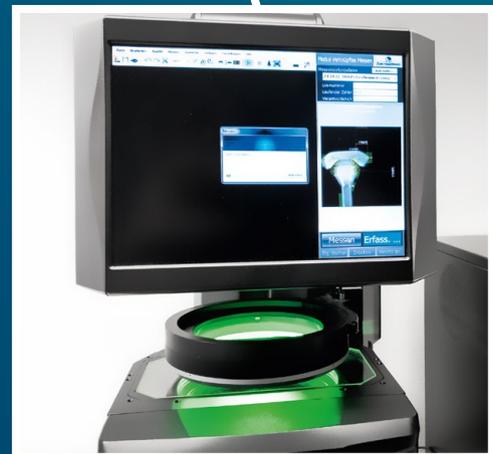

MANUFACTURING AND FURTHER PROCESSING

We customise production according to the nature of the material and the area of application, recommending a suitable production technique for every production run and article size. Naturally, this includes the production of prototypes, models or small batches according to your specifications. On request, we deliver the finished goods in a clean, packaged form – or in a suitable form for further processing in clean rooms – along with the appropriate declarations of conformity and certificates.

CONTINUOUS QUALITY CONTROLS

A sophisticated quality management system, for which we are certified according to DIN ISO 9001, guarantees the implementation of continuous quality controls from material receipt to production, finishing and dispatch.

CUSTOM PRODUCTS FOR SPECIAL REQUIREMENTS

We have the full range of elastomer-processing capabilities at our disposal in order to meet your requirements. In general, we divide products into the following groups:

SEALS

Different production methods allow us to manufacture numerous types of seals, including disks, moulded parts or rings. Through a combination of materials and production processes, we will find the best possible solution for your field of application.

PROFILES AND TUBES

Our product range includes a multitude of standard solutions made from rubber and silicone with different specifications. From special sizes to special materials and customisation with X-ray contrast stripes or similar, we will supply you with the perfect product to meet your needs.

SPECIAL ARTICLES

Is your perfect product yet to be invented? Then you've come to the right place! We will be in our element as we work with you to develop highly specialised products that are tailored to your individual application.

AREAS OF APPLICATION

The areas in which our solutions are applied are as varied as our products themselves. With long-standing experience in the production of sophisticated, high-quality products, we are particularly qualified for sensitive areas of application.

MEDICINE AND PHARMACY

Here, there is a particular need for clean materials and processes, which are often also subject to requirements relating to physiological or chemical safety and conformity with a wide range of national and international guidelines.

INDUSTRY

In many areas of industrial manufacturing and processing, rubber and silicone are an indispensable component of systems, machines and equipment, typically in the form of extruded or moulded articles.

CHEMISTRY

In this area, it is essential that packaging-sealing systems do not interact with the packaged goods or analysis samples.

LABORATORY AND ANALYSIS

Laboratory equipment makes use of a wide range of elastomer articles with special properties, such as tubes made of natural rubber and silicone, stoppers for test tubes and seals, which are required to be chemically neutral but also resistant to the reagents used.

GUMMI-WÖHLEKE GMBH

With over 50 years of experience, we specialise in the manufacturing and distribution of specialist items for the areas of medicine and pharmacy, industry, chemistry and laboratory and analysis. As a specialist in rubber and silicone, we provide custom and tailor-made items adapted to your specific requirements.

Over many years of close collaboration with partner companies, we have built up an efficient network that is equipped for the whole spectrum of elastomer production and processing. We therefore have a reliable and unique infrastructure at our disposal, allowing us to provide a comprehensive range of high-quality services. The integral part of our work lies in advising and supporting our customers during design and development.

QUALITY PROMISE

Our aim is to position ourselves as a capable provider of specialist products and high-quality services – with a high level of reliability and continuity – in niche markets in the areas of medicine and pharmacy, industry, chemistry and laboratory and analysis.

A sophisticated quality management system, for which we are certified according to DIN ISO 9001, guarantees the realisation of our company philosophy. Our decades of experience and profound knowledge of processes, requirements and the materials used represent our most valuable resources, which are optimised and passed on to our employees as part of a continual improvement process.

This is accompanied by constantly supporting our staff's awareness of quality and general level of expertise. Long-term and targeted observation of products and processes – from the supply of materials to manufacturing, finishing and shipping – facilitates transparency and traceability, and makes the concept of quality the guiding principle for all our activities.
